

## BIODIVERSITY OFFSETS

Where appropriate, a biodiversity offset may be used to counterbalance a loss of environmental values, after avoidance and mitigation measures are taken. Offsets should be considered as early as possible in the EIA process.

There is no single approach to designing, developing or implementing biodiversity offsets. Our team has been involved in a number of offset related projects in WA, including the development and management of Biodiversity Trusts.

### Our services include:

- Assistance with biodiversity offset policy and legislation in WA & Australia, and how this could relate to your project.
- Offset options analysis.
- Designing & calculating offsets for development projects.
- Development of supporting documentation, including monitoring & management plans.
- Peer review of reports and data relating to offset program implementation.
- Stakeholder engagement and negotiation activities for offsets.

Integrate Sustainability will work closely with clients to tailor a suitable offset strategy that meets the needs of the client and regulator.
